Heuristic Evaluation

Visibility of system status

- make the nav bar look a bit different in addition to moving its position so its status/context is more clear.

Match - system and real world

- "Text" option in settings should be "text size" or "change text size", to be more clear.

User control & freedom

- no undo for changing things (see below)
- ★ - can't remove a ~~tab~~ bookmark

Error prevention

- ★ - No confirmation before history is cleared or other settings changed or homepage set. or bookmark added.

flexibility & efficiency of use

- could be more accelerators, some design choices added extra clicks to tasks for sake of usability.

help recognize errors/help & documentation

- Should have error message(s) for all bar functions
- might be good to have first time tooltips for all functions
